

Home Energy SolutionsSM Landlord Authorization Form

ENERGIZE CONNECTICUTSM

How Home Energy Solutions Works:

A utility-approved technician will evaluate your home's energy performance and install basic weatherization and energy-saving measures.

Services can include:

- Health and safety evaluation
- Sealing air leaks and ductwork
- Installing hot water pipe wrap, faucet aerators and low-flow showerheads

The average home in Connecticut receives about \$950 in services and realizes \$180 in savings on their annual energy bills. Additionally, the technician will provide written recommendations for deeper energy-saving measures such as advanced duct sealing, insulation, high-efficiency heating, cooling and water heating equipment, windows and appliances.

To help you make smart energy choices, recommendations will include information on rebates and financing along with payback and investment information specific to your home.
